### DETAILED ACTION

1. This communication is responsive to your preliminary amendment filed May 18, 2005. Claims 1-28 are currently pending in this application.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Schenck P.N. 5,561,371.

Schenck discloses a gradient coil for a Magnetic Resonance Imaging apparatus.

Applicant's attention is directed to Fig. 5-8 and their corresponding description. The gradient coil includes:

a primary coil 51 defining an inner cylindrical surface 63,  
a shield coil 53 defining an outer cylindrical surface 63 coaxially aligned with the inner cylindrical surface 61 and having a larger cylindrical radius ( $a_2 > a_1$ ) than the inner cylindrical surface ; and a plurality of coil jumps 55 electrically connecting the primary and shield coils, the coil jumps 53 defining a non-planar current-sharing surface 65 extending between an inner contour coinciding with the inner cylindrical surface 61 and an outer contour coinciding with the outer cylindrical surface 63, the primary coil,

shield coil , and coil jumps cooperatively defining a current path that passes across the current-sharing surface 65 between the inner and outer contours, a plurality of times.

Note further, that the current sharing surface is conical, that the lengths of the cylindrical surfaces are different. Also as described in col. 7, the mathematical treatment allows for optimization of parameters such as gradient coil linearity, uniformity and stored energy by the selection of the conductor paths.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kimmlingen et al., Petropoulos et al. and Pausch et al. all disclose shielded gradient coils for MR imagers. Note the coil jumps and edge characteristics for the gradient coils in each of these documents.
